SLOs: Worksheet

Note: Please save a copy of this worksheet for editing purposes.

Follow the **four-step process** we demonstrated during the workshop:
1. Choose an **SLI specification**
2. Substitute **definitions** to create a detailed **SLI implementation**
3. Walkthrough user journey and look for **coverage gaps**
4. Set **aspirational SLOs** based on **business needs**.

Make sure that your SLIs have an **event**, *a* **success criterion**, *and that they specify* **where and how** *you record success or failure. Describe your specification as the proportion of* **events** *that were* **valid**. *Make sure that your SLO specifies both a* **target** *and a* **measurement window**.
